The Latest on the Farm Seed Situation

The surplus in wheat, corn and cotton in this country together with the Soil Conservation Program will cause an increase in the plantings of Alfalfas, Clovers and the grasses. Prices could easily advance from present low levels.

There were large crops of Alfalfa and Clover seed harvested in 1940 and prices are much lower than for several years. We believe that purchases should be made at present low levels. Right now there is a stronger feeling and markets are firm.

Total stocks of merchantable potatoes on hand as of January 1, 1941 in the 37 late and intermediate states were 118,555,000 bushels or about 14 million bushels more than last year. This increase will be more than offset by the Starch Diversion Program in Maine, the Livestock Feed Diversion Program in the western states and the Food Stamp Program. With more of our people gainfully employed than ever before in history and with these government agencies taking the surplus out of consumption there is every reason to believe that there will be an improvement in old potato markets.

SEED CORN OF GOOD QUALITY ESPECIALLY SCARCE

The supply of mature seed corn of high germination in New York, Pennsylvania and Ohio is the shortest in many years. The crop was planted late and did not have the warm weather necessary to make good corn. Lack of drying weather in the fall of 1940 and early freezes made conditions still worse. Many crops never matured and still many more that did mature carried a very high moisture content both in kernel and in cob. Corn with a high moisture content was severely damaged for seed. Germination tests at the Experimental Stations of New York, Pennsylvania, and Ohio show that the outlook for good seed corn is very unsatisfactory.

Our company realized the situation and took steps to properly dry our corn before cold weather and as a result we have a good supply of high germinating seed. Let us supply your needs while stocks are still available. Avoid using unadapted varieties.

A True Statement Concerning this years Seed Corn

The supply of mature Seed Corn of high germination for our Northeastern farmers is the shortest in many years. The crop was planted late and did not have the warm weather necessary to make good seed. Lack of drying weather in the fall of 1940 and early freezes made conditions still worse. Those crops that did mature carried so much moisture, both in kernel and in cob, that unless they were carefully dried much of the germination power was ruined by freezing. Germination tests at the Experimental Stations of New York, Pennsylvania, and Ohio show that the outlook for good seed is very unsatisfactory. This year there is not sufficient seed of adapted varieties to plant the usual acreage in the Northeast. Let us supply your needs while stocks are still available.

Our Juanantee

For fifty years we have been supplying the needs of American farmers. Our business policy has been based on an ideal which we adopted fifty vears ago. "FARM SEEDS AND FARM SEEDS ONLY; ONE GRADE AND THAT THE BEST OBTAINABLE AT THE LOWEST PRICE CONSISTENT WITH THE HIGHEST POSSIBLE QUALITY."

There is just one reason why we can afford to make the guarantee we do and allow you to be both judge and jury, and that is because our seeds are that kind. And our special guarantee or warranty is printed on the respective pages describing our seeds, and our various seeds are sold subject to the guarantee so printed. We are perfectly reliable and responsible. We refer you to the State Bank of Honeoye Falls, N. Y., Lincoln Alliance Bank and Trust Co., Rochester, N.
